Power BI is a unified, scalable business intelligence (BI) and data visualization platform developed by Microsoft. It consists of a collection of software services, apps, and connectors that work together to turn unrelated sources of data into coherent, visually immersive, and interactive insights. It allows users to connect to data, clean and transform it using Power Query, build data models with Power Pivot, and create interactive charts and dashboards.

Primary Platforms of Power BI

The Power BI ecosystem is built around three main platforms that work together:

Power BI Desktop: A free Windows-based application used for development. It is the primary tool for connecting to data sources, transforming data, and designing reports.

Power BI Service: A cloud-based Software-as-a-Service (SaaS) platform (formerly known as Power BI Online). It is used to publish, share, and collaborate on reports and dashboards with others in an organization.

Power BI Mobile: Native apps for iOS, Android, and Windows devices that allow users to view and interact with reports and dashboards on the go

Please refer the separate DAX.PBIX file created for the DAX question.
